

I simple explain it in English as follows:

1. Take square 40mm as sample here, please install **bottom square frame** like the picture, then put **the surface panel** in the groove. At last **cover the top square profile**.

2. Light floor structure is finished, then please begin to **cabling and installing light tube** inside.

3. After electronic lines and light tube all finished, please **cover cap (just like a adhesive tape)** on the aluminum around (just like picture), finally **spread toughened glass** on aluminum frame.

4. These are all finished.
